

Unified Diocese-Parish Automation Software

Single Point, One-time Initial Data Entry

Own Vs Outsourced Software

Software development is a continuous process to stay compatible with the ever changing technology and new devices.

With own software, you bear the entire development cost and continue to spend on maintenance, upgrades and enhancements for ever. When outsourced, you share the cost with others, making it affordable for you and others.

With own software, code and database are exposed to your Developers. When outsourced, database remains exclusively with you, making it more secure.

This is why outsourcing of software is a preferred choice.

True automation is the capability of software to handle all related tasks without re-entering any data. It took seven years of development for Parishinfo to accomplish this capability!

Parishinfo Highlights

- Developed with wider consultations
- Single point data entry
- Uniform system across the diocese
- Separate control panel for Everyone
- Stay connected, Work from anywhere
- Centralised implementation & support
- Built-in communication tools
- Mobile app with 19 modules
- Quick member registration
- No parish-wise installation or maintenance
- Mobilise untapped knowledge & resources
- Carries name, logo & identity of each diocese
- Owned, controlled & managed by Diocese
- Auto populate data to modules, directories
- Lowest pricing at Rs.100/- per parish, p.m.
- High level security as SOP
- Auto compilation of accounts to curia
- Deliver news and information to all instantly

Continuity Assured. Affordably Priced.

Always stay Connected

Anywhere, Anytime, Any Device Access

Main Features

- Funds and Contributions
- Revenue generating Banners
- Marriage Banns
- Certificates
- Online Applications
- Pastoral Visit Record
- Opinion Polls
- Talents and Skills
- News Bulletins
- Vacancies
- Family Link, Beloveds
- Matrimony
- Intentions
- Parish Hall Booking
- Auto Greetings
- Family History
- Asset Register
- Digital Archiving
- Calendars

Managed by You. Controlled by You. Supported by Us.

Top Rated Mobile App for Top Rated Software

Stay Relevant with World-Class Technology

How to implement Parishinfo

Ask for a demonstration. The demonstration is provided free of cost at your location on a mutually convenient date and time. Demo gives an insight into the actual requirements of a successful Diocese-Parish automation software. It will also help a great deal whether you plan to improve your existing software or develop one. Also, contact other dioceses implementing Parishinfo to understand from a user perspective.

If decided to go ahead with Parishinfo, then designate a priest to study the software in detail. We provide detailed training on the software as well as server side administration, at our facility with free boarding and lodging. The training will also cover how to safe guard other soft assets within the diocese.

After the training, a detailed report is presented to the diocesan management. If accepted, service agreement is signed-up and customization of software features, logo and name are incorporated. Customization takes around two weeks.

In the meanwhile, each Forane/Deanery appoints a Coordinator who will train their parish team in consultation with the Parish Priest. If required, Parishinfo team can also be requested to step-in to conduct the training programme. Thereafter, server is ordered and a certified version of the application is released.

Above is the successful implementation roadmap adopted by Dioceses with large number of parishes.
